

THE COMPANIES FUNDING HORROR & SCI-FI.

A discovery engine that finds, qualifies, and ranks the financing entities behind horror and science-fiction films across the United States, Europe, and Canada — every one it can evidence from public record, with the money separated from the credits.

Horror + Sci-Fi

US · Europe · Canada

Financing active in the last 10 years

Indie band ≤ \$10M first

01 THE ASK, IN YOUR WORDS

“Basically looking for every movie financing company in the last 10 years that has made horror and sci-fi movies in both America, Europe and Canada.”

— THE BRIEF THIS DELIVERABLE IS BUILT TO ANSWER

One clarification is built into the design: you asked for companies that *made* these films — what you actually want is the ones that **put up the money**. A “producer” credit is often creative, not financial. So the engine classifies **money vs. craft** and reports only entities it can evidence as financiers, each with a confidence level.

02 WHAT YOU RECEIVE

A ranked shortlist	Financing entities that backed horror/sci-fi in your territories, ordered by how warm the lead is — recent genre activity, budget-band fit, and a reachable contact.
A searchable database	Filter by genre, territory, budget band, entity type, and recency. Export any cut to a spreadsheet.
Evidence on every row	Each claim links to its source — a filing, a deal announcement, the fund’s own mandate — with the date it was retrieved.
Verified contacts	Where a contact exists on the entity’s own public channels, it’s validated before it’s marked usable — never guessed.
A dashboard	For you and a small team to browse, filter, and pull lists per project.

Hollow
Lantern
Pictures

QUALIFIED · SUB-\$10M

TYPE	Production company & equity financier
GENRE AFFINITY	Horror Sci-Fi Thriller
FINANCED FILMS	4 with known budgets · \$2.5M–\$6M · median \$3.8M
LAST GENRE DEAL	2025 · RECENT
TERRITORY	US / UK co-productions
CONTACT	Submissions channel · VERIFIED
WHY IT QUALIFIES	Financier language in 3 deal announcements + 1 SEC filing; median budget under cap; active this year.

Illustrative record — the format of a row, not a real listing.

03 SCOPE, PRECISELY

Genre

Horror and science-fiction, including genre-blend titles that lean into either.

Boundary confirmed with you before the run.

Territory

United States, Europe, and Canada — financiers operating in or co-producing across these markets.

Window

Financing activity in the last 10 years, dated by the deal — not the film's release year.

Budget band

The ≤ \$10M indie band first. Widening to all budget levels is a funded add-on, not a rebuild.

Entity types

Companies & funds, sales agents / MG-providing distributors, tax-credit & soft-money bodies, and individual financiers where public.

Financed, not filmed

Only entities evidenced as putting up money — equity, MG advances, gap loans, soft money — not creative credits.

Genre note worth knowing: horror and sci-fi money is unusually **sales-agent and MG-driven**. Including those entity types isn't padding — for this genre it's where a lot of the real money sits.

04 WHAT THIS CAN — AND CAN'T — PROMISE

✓ What we deliver

- Every **discoverable** — filings, trade financing **from public** deal entity **record** announcements, festival and market data, funds' own mandates.
- Each **correctly** (money **ranked** by genre-one **qualified** vs. specific craft) and warm signal.
- Provenance and a **every figure and** confidence level on **every classification**.
- A living database that refreshes as new deals are announced.

✗ What we won't claim

- That **“every”** . A large share of **no** it is **financier,** sub-\$10M genre **public** **full stop** money is private **trace** individuals, family offices, and single-film SPVs that leave
- A budget we can't source — “unknown” is reported honestly, never invented.
- A contact that isn't verified — no pattern-guessed emails.

This honesty is the point of the tool. It delivers **comprehensive and evidenced**, not a false “complete.” The value is a short, correct, reachable list — the kind you can actually act on.

05 WHAT YOUR INVESTMENT BUYS — DATA QUALITY

The engine runs on free public data by default. Paid data licenses close specific gaps. We buy the cheapest license that clears the current bottleneck — nothing on spec. For this genre ask, two are worth it up front:

Budget data — OpusData	RECOMMENDED	Reliable film budgets — the single weakest link in public data. Fixes qualification accuracy for the ≤ \$10M cut.	~\$20–250 /MO OR ONE-TIME EXTRACT
Market data — Cinando (Cannes / AFM)	RECOMMENDED	The B2B database of sales agents, buyers, and distributors — where genre/horror/sci-fi money concentrates. Best value via market accreditation.	~\$50–100 /MO AMORTIZED
Comprehensive credits — IMDb commercial license		Deeper credit coverage and stronger entity matching. Only if coverage becomes the bottleneck.	~\$500–2,000+ /MO · OPTIONAL
Deal tracking — Variety Insight / Studio System		Enterprise deal + contact intelligence. Highest cost, narrowest marginal gain here.	~\$300–1,000+ /MO · OPTIONAL

06 THE NUMBERS

ITEM	AMOUNT
One-time data setup & corpus build Extraction, scraping of permitted sources, and initial budget-data extracts to build the genre corpus.	\$400–900
Market-data access — Cinando Sales-agent / buyer database via accreditation (1 year). Optional but high-value for genre.	\$300–700 one-time / yr
Platform & running data Database, hosting, scraping, model calls, budget subscription, and contact verification, per month while live.	\$115–350 /mo
Professional fee — build & delivery My time to build and deliver the scoped genre map. Suggested basis: a fixed project fee for the first full deliverable (roughly 3–5 weeks of focused work).	By discussion

To start One-time setup + first month of platform + agreed fee. Optional licenses added only if you want maximum coverage.	~\$900–1,900 + fee
--	------------------------------

Data-vendor pricing is quote-based and use-case-dependent; figures are planning-grade and confirmed with a real quote before any spend.

FOR COMPARISON — THE SAME CAPABILITY, COMMISSIONED THE TRADITIONAL WAY

THIS ENGAGEMENT

A lean, AI-accelerated build delivered by one operator.

\$900–1,900

TO START + FEE BY DISCUSSION

Running cost **\$115–350 /mo**

Maintenance **Included**

Time to first list **~2 weeks**

COMMISSIONED FROM A SOFTWARE / DATA AGENCY

A custom data platform built by a 4–6 person team.

\$80k–250k

TO BUILD · INDUSTRY AVERAGE ≈ \$132K

Annual maintenance **\$15k–50k /yr**

Data licensing **On top**

Typical timeline **5–13 months**

Same outcome, a fraction of the cost — because you're funding the build itself, not an agency's team, project managers, and margin.

Agency figures are 2026 industry benchmarks for a mid-complexity custom data platform (Clutch average custom project ≈ \$132k; maintenance 15–25%/yr), not a quote — scope defines the number.

07 DELIVERY

WEEKS 1–2

First ranked draft

Financiers pulled from hard evidence — securities filings and trade deal announcements. A real list you can react to early.

WEEKS 3–5

Breadth & contacts

Sales agents, soft-money bodies, and fund / production-company mandates across the US, Europe, and Canada; contacts pulled and verified.

WEEKS 6–8

Full delivery

Searchable database, ranked shortlist, dashboard, and export — the complete scoped deliverable in your hands.

08 TO GREEN-LIGHT

- 1 **Confirm the genre boundary.** Does sci-fi include genre-blend and thriller-adjacent titles, or stay tightly defined?
- 2 **Confirm the territories.** “Europe” is broad — which countries matter most (UK, France, Germany, Spain, the Nordics ...)?
- 3 **Approve the one-time data setup** so the corpus build and quality-data extracts can begin.
- 4 **Agree the professional fee** for the build and delivery.

Genre Financing Map Prepared for Brandon Auman By Marcus Gray 19 July 2026

“Comprehensive” means every financier discoverable from public record — not a guarantee of completeness. A significant share of sub-\$10M genre financing comes from private individuals, family offices, and single-purpose vehicles that leave little or no public trace, and will not appear. All cost figures are planning-grade estimates pending vendor quotes. Data sources are used within their terms of service; prohibited sources are excluded by design.
